Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw spy, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kautoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo; NY. The library is named RPC-198 and was constructed by partial Ecora disestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfiy.org The BDGP Prosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecori digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BE357122 460 bp mRNA linear EST 20-JUL-2000 DG1_146_B03.g1_A002 Dark Grown 1 (DG1) Sorghum bicolor cDNA, mRNA

DNA encoding novel CDNA encoding a mu CPNA encoding a mu Murine interleukin

CDNA encoding a hu Human interleukin-Auman Interleukin-Human cDNA encodin Native sequence of Human PRO10272 cDN

Description

Human IL-17 recept

cDNA encoding a mucDNA encoding a mu

Human interleukin-Human LP-48 gene.

Mouse Interleukin-Mouse non-secreted

cDNA encoding a no Human Interleukin Human DNA encoding Human cDNA encodin

proliferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying compounds that selectively bind to IL-171.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence encodes an interleukin (IL)-174 polypeptide. It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues IL-171, IL-172, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying quenes, mRNA and CDNA molecules which code for related or homologous proteins. The IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions.
                                                                                                                                                                                                                                                                                                                                  Interleukin; IL-171; cytokine; CTLA-8; IL-17; IL-175; IL-173; IL-174; IL-176; IL-177; cell proliferation; cancer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-177, and IL-171, and IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic

Temporate, augments the inflammatory response from epithelial or fibroblast cells, induces gut cell growth, promotes extramedullary hammatories, augments the inflammatory response in serum and faecal material, while administration of an IL-174 antagonist directs the immune response away from a Th2 type response, and prevents inflammation or granuloma formation. IL-174 agonists may be used to treat autoimmune conditions (particularly multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, diabetes or psoriasis), a response to an infectious agent, or inflammatory conditions such as Crohn's disease, ulcerative colitis, pancreatitis, or hepatitis. IL-174 antagonists may be used to treat inflammatory, allergic or Th2-mediated conditions (e.g., systemic anaphylactic response, skin hypersensitivity response, dermatitis, asthma, fibrosis, or eosinophilic gastritis). The
                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to methods of directing an immune response in a mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a TD: response, stimulates an innate immune

The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, of IL-17 protein is useful for treating, or executing or ameliorating a disease, such as immune system dysfunction (Theumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV, Chepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung caute respiratory distreas syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerulonephitis); bone costeoporosis, paget's disease, hypercalcaemia) vascular system (epilepsy atherosociarosis, heart failure, angiogenesis); tumours, cancers (lymphoma leukaemia); reproductive (infertility, miscarriage, endomerriosis), eye (blindness, retinal neuropathy) and treatment of diseases involving on the present sequence is human interleukin-17 like (IL-17L).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        218

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence (DNA 147531-2821) encodes a PRO polypeptide (PRO10272)
which is the human Interleukin 17E ligand, IL-17E. A composition
containing ant-fagonists to the PRO polypeptides or individual components
are useful for treating a mammal with an immune related disease, e.g.
systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,
luvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an
idiopathic inflammatory myopathy, Sjogren's syndrome, systemic
vasculitis, sarcoidosis, autoinmune hemolytic anaemia, autoinmune
thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal
sisease, a demyelinating disease, an autoimmune or immune-mediated skin
disease, contact dermatitis, an allegic disease e.g. food
hypersensitivity, asthma, a transplantation associated disease, or a
chronic inflammatory demyelinating polyneuropathy. Treating a
degenerative cartilaginous disorder comprises administering a PRO1031 or
PRO1122 polypeptide agonist, or antagonist to the mammal. Numerous
examples of the diseases and disorders are given in the specification.

The sequences given in AAC85961-69 encode PRO polypeptides. PRO1081, PRO1274 and PRO10272 stimulate the proliferation of T-lymphocytes and PRO1199, PRO1565. PRO4401 and PRO10268 inhibit the proliferation of T-lymphocytes. PRO1754 and PRO9112 act to enhance the infiltration of mononuclear cells, eosinophils or polymorphonuclear neutrophils (PMN) into the tissue of a mammal. The PRO CDNA's and antibodies which bind to them, are used to treat an immune-related disorder in a mammal. Such disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogrem's systemic vaculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demygalinating disease of the contract of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           demyelinating polymeuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polymeuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary biliary cirrhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, an allergic disease, athua, allergic rhinitis, atopic dermatitis, on hypersensitivity, urticaria, an immunologic disease of the lung, pheumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonia, idiopathic pulmonary fibrosis, hypersensitivity graft-versus-host disease.

The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antiagonists or anti-PRO antiadoles are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular
biology, including use as hybridisation probes, and in chromosome and
                                               Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and in chromosome and gene mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Godowski PJ;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The cand gene also used in diagnostics as expressed sequence tags to identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in caspostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and diagnostic coding sequences of data and products dependent on DNA and diagnostic coding sequences of fate invention.

Specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence encodes an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-171. IL-173, IL-174, IL-176, IL-177, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide encoding a mammalian Interleukin-17 like protein used to identify genes for homologous proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The present sequence encodes an interleukin (IL)-174 polypeptide. It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as. IL-17). The specification also describes homologues IL-171, IL-172, IL-172, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mRNA and CDNA molecules which code for related or homologous proteins. The IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying compounds that selectively bind to IL-171.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

The invention relates to methods of directing an immune response in a mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a Th2 response, stimulates an innate immune response towards a Th2 response, stimulates an innate immune response, augments the inflammatory response from epithelial or fibroblast cells, induces gut cell growth, promotes extramedulary haematopoiesis, or augments an antibody response in serum and faecal material, while administration of an IL-174 antagonist directs the immune response away from a Th2 type response, and prevents inflammation or granuloma formation. IL-174 agonists may be used to treat autoimmune conditions (particularly multiple sclerosis, systemic lupus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  erythematosus, rheumatoid arthritis, diabetes or psoriasis), a response to an infectious agent, or inflammatory conditions such as Crohn's disease, ulcerative colitis, pancreatitis, or hepatitis. IL-174 antagonists may be used to treat inflammatory, allergic or Th2-mediated conditions (e.g., systemic anaphylactic response, skin hypersensitivity response, dermatitis, asthma, fibrosis, or eosinophilic gastritis). The present sequence represents DNA encoding murine IL-174.

The present sequence is mouse Interleukin-17 like (IL-17L)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-ilke polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 ATCCAGGAGGCTGCAGTACCTTGCCCAGCTGCCCCAGCAAAAACCCCCG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a disease, uch as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV,

The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-176, IL-177, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SerGluLeuLeuTyrHisAsnGlnThrValPheTyrArgArgProCysHisGlyGluLys 133

                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction remembered arthritis, osteoarthritis, inflammatory joint disease); cutoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV, chepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerutonephritis); bone (osteoporosis, Paget's disease, hypercalcaemia) vascular system (epilepsy atherososis, heart failure, angiogenesis); tumours, cancers (lymphoma leuwaemia); reproductive (infertility, miscarriage, endometriosis), eye (blindness, retinal neuropathy) and treatment of diseases involving inflammation. The present sequence is human Interleukin-17 like (IL-17L)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

coding sequences are useful for treating a pathological condition related to immune system dysfunction (e.g. psoriatic arthritis), infections (e.g. viral infections), weight disorders (e.g. obesity), neuronal dysfunction disorders (e.g. Alzheimer's disease), lung disorders (e.g. asthma), skin bone disease (e.g. eczema), kidney disorders (e.g. glomerulonephritis), bone disease (e.g. osteoporosis), vascular system disorders (e.g. ischaemia), eye disorders, reproductive disorders, tumours and inflammation. The present sequence is the coding sequence for IL-17E, a human IL-17 receptor like protein ligand.
                                                                                                                                                                                                                                                                                             240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      임
```

```
The present sequence encodes an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-11ke (CTIA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-176, IL-177, and IL-171. IL-170 protein can be used to treat abnormal protliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             259

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence encodes an interleukin (IL)-174 polypeptide. It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues IL-171. IL-172, IL-173, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mkNA and cDNA molecules which code for related or homologous proteins. The IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying

                                                                                                      ò
                                                                                                                                                                                                                       mammal by the administration of an agonist or antagonist of the cytokine mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a Th2 response, stimulates an innate immune response towards the inflammatory response from epithelial or fibroblast cells, induces gut cell growth, promotes extramedullary haematopoiesis, or augments an antibody response in serum and faecal material, while administration of an IL-174 antagonist directs the immune response away from a Th2 type response, and prevents inflammation or granuloma formation. IL-174 agonists may be used to treat autoimmune conditions (particularly multiple sclerosis, systemic lupus conditions agent, or inflammatory conditions such as Crohn's disease, ulcerative collis, pancreatitis, or hepatitis. IL-174 autagonists may be used to treat inflammatory, allergic or Th2-mediated conditions (e.g., systemic anaphylactic response, skin hypersensitivity response, dermatitis, asthma, fibrosis, or coshipphilic gastritis). The

 The sequence (DNA 147531-2821) encodes a PRO polypeptide (PRO10222)
which is the human Interleukin 17E ligand, IL-17E. A composition
containing ant-fagonists to the PRO polypeptides or individual components
are useful for treating a mammal with an immune related disease, e.g.
uvenile chronic arthritis, a spondyloarthritis, osteoarthritis,
idiopathic inflammatory myopathy, Sjoren's syndrome, systemic sclerosis, an
idiopathic inflammatory myopathy, Sjoren's syndrome, systemic
vascultis, sarcoidosis, autoimmune heamolytic anaemia, autoimmune
thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated skin
disease, a demyellnating disease, an autoimmune or immune-mediated skin
disease, contact dermatitis, an allergic disease e.g. food
hypersensitivity, asthma, a transplantation associated disease, or a
chronic inflammatory demyelinating polyneuropathy. Treating a
degenerative cartilaginous disorder comprises administering a PRO1031 or
PRO1122 Polypeptide agonist, or antagonist to the mammal. Numerous
examples of the diseases and disorders are given in the specification.
                                                                                                                                                                                                                                                                                 ö

PRO polypeptide useful for treat or diagnose an immune-related e.g. arthritis, asthma, allergy, diabetes or psoriasis Isolated PRO p disorder e.g.

Claim 2; Fig 17; 124pp; English.

autoimmune haemolytic anaemia, autoimmune thrombocytopaenia, thyroiditis, diabetes mellitus; immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, Guillain-Barre syndrome, a chronic inflammatory demyelinating polyneuropathy, a hepatobiliary disease, The sequences given in AAC85961-69 encode PRO polypeptides. PRO1081, PRO1274 and PRO10272 stimulate the proliferation of T-lymphocytes and PRO1059, PRO1401 and PRO10268 inhibit the proliferation of T-lymphocytes. PRO1754 and PRO91028 inhibit the proliferation of mononuclear cells, eosinophils or polymorphonuclear neutrophils (PMN) into them, are used to treat an immune-related disorder in bind to them, are used to treat an immune-related disorder in theumatoid arthritis, osteoarthritis, juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogren's syndrome, systemic vasculitis, sarcoidosis,

                                                                                                                                                                                                                                                                                                                               The present sequence is the coding sequence for a human PRO polypeptide
                                                                                                                                                                                                                                                                                                                                          (secreted and transmembrane). The PRO protein, and PRO agonists, PRO anti-profiles are useful for preparation of a anti-profiles are useful for preparation of a medicament useful in the treatment of a condition which is responsive the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              284
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        432

                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags of to independ or man activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving applyament. (II) and its sum colecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasping the for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human call and activity of diagnostic coding sequences of the invention.

The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a such as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimnume (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV, (hepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerulonephritis); bone (osteoporosis, Paget's disease, hypercalcaemia) vascular system (epilepsy atherosclerosis, heart failure, anglogenesis); tumours, cancers (lymphoma heart sandy and the second second
                                                                                                                                                                                                                                                                                                                        Nucleic acid molecules encoding Interleukin 17 (IL-17) - like polypeptides useful in the treatment, prevention and diagnosis of diseases e.g. cancer -

RESULT 11
           AAD28773
```

The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV, hepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung acute respiratory distress syndrome, cystic fibrosis; emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerulonephritis); bone (osteoporosis, Paget's disease, hypercalcaemia) vascular system (epilepsy atherosclerosis, heart failure, angiogenesis); tumours, cancers (lymphoma leukaemia); reproductive (infertility, miscarriage, endometriosis), eye (blindness, retinal neuropathy) and treatment of diseases involving inflammation. The present sequence is non-secreted form of mouse Interleukin-17 like (IL-17L) cDNA

Nucleic acid molecules encoding Interleukin 17 (IL-17) - like polypeptides useful in the treatment, prevention and diagnosis of diseases e.g. cancer -

Claim 1; Fig 2; 242pp; English.

Sequence 1496 BP; 347 A; 417 C; 410 G; 322 T; 0 other;

```
The present sequence encodes an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-177, and IL-177, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 ATCCAGGAGGCTGCAGTGCCCAGTGCCCAGCAAAAAGCCCCCC 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes an interleukin (IL)-174 polypeptide.

It is a mammalian homologue of the cytckine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues

IL-171, IL-175, IL-172, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mRNA and cDNA molecules which code for related or homologous proteins. The IL-171 protein, antibodies against IL-171 and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions.

The IL-171 protein can be used in kits and assay methods for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New DNA sequence encoding a mammalian homolog of CTLA-8, designated interleukin-171 (IL-171), useful for recombinant production of IL-171 which can be used for treating conditions associated with abnormal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 ATCCAGGAGGCTGCAGTGCCCAGCTGCTGCCCCAGCAAAGAGCAAGAACCCCCG 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                  The invention relates to methods of directing an immune response in a mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a Th2 response, stimulates an innate immune cesponse, augments the inflammatory response from epithelial or consequences in a seriam and faceal material, while administration of an IL-174 antagonist directs the immune response away from a Th2 type response, and prevents inflammation or granuloma formation. IL-174 agonists may be used to treat autoimmune conditions (particularly multiple sclerosis, systemic lupus a response conditions (particularly multiple sclerosis, systemic lupus conditions agent, or inflammatory conditions such as Crohn's disease, ulcerative colitis, pancreatitis, or hepatitis. IL-174 conditions (e.g., systemic anaphylactic response, skin hypersensitivity response, dermatitis, asthma, fibrosis, or eosinophilic gastritis). The present sequence represents DNA encoding murine IL-174.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           360

The present sequence encodes an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-176, IL-177, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              119
